NEW DWARF FRUIT TREES

Dwarf Fruit Trees are ideal ornamental plants, combining beauty and utility in a most delightful way. They grow no taller than a man can reach, and produce extra large, delicious fruit.

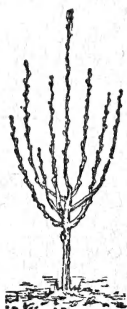

According to the latest records at the New York State Agricultural Experiment Station, Geneva, N. Y., more than half the Apple Trees, budded on dwarfing Malling rootstocks

WILL BEAR FRUIT THE FIRST YEAR PLANTED,

and the rest will surely fruit the second year.

Since those records were published, and visitors at Geneva saw the small trees last fall, loaded with delicious fruit, there is a steadily growing interest in such trees.

We are one of the few nurseries supplying Dwarf Apple Trees guaranteed to be budded on Malling rootstocks which insure dwarf habit and early yields.

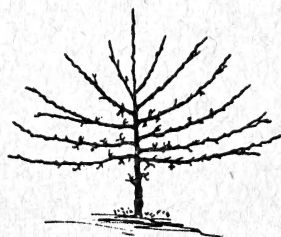

DWARF VERTICAL CORDONS

Vertical Cordons are Espalier Trees which require a minimum of space, and will create a striking effect. They can be planted 2 ft. apart, and are most attractive when used as a border along a walk or a wall. Vertical Cordons have become the most popular garden type of tree in Europe, and they are now available in America. A dozen or more trees can be planted in the same space that a single Standard fruit tree would require. We have Dwarf Apple and Pear Vertical Cordons.

Vertical Cordons are easy to care for. Directions will be included in each shipment.

FAN-SHAPED ESPALIER TREES

Fan-shaped Espalier Trees make a beautiful decoration for the side of your home or garage. They need no more room or care than a Climbing Rose, are a never ending point of interest, and will supply your table with delicious fruit.

Any home having a wall which has been neglected can now turn that portion of the home grounds into a little orchard with but very little expense.

We have Fan-Shaped Sour Cherries and Peach Trees.

WHAT TO PLANT: DWARF OR STANDARD FRUIT TREES?

Dwarf Fruit Trees should be preferred where space is limited. They are the ideal garden-type of tree for city and suburban homes while Standard Fruit Trees should be planted where sufficient space is available, and in commercial orchards.

BEST SIZES AND GRADES TO PLANT

Standard Fruit Trees are listed in various sizes. Which should be preferred?

Our 20 years of experience in the nursery business leads us to advise you to plant only the best grades. It pays better to plant a few large trees instead of twice as many small, inferior trees.

Fruit Trees are an investment for decades, and sometimes for generations. The purchase price of a fruit tree does not mean much when you realize that 1 or 2 bushels of fruit will pay for it.

Therefore, plant a few trees of the best grades each year, such as trees of Bearing-Age or the 2-year Extra Heavy size. Both grades are offered at prices which are unusually low for that quality.

Both the same age—a 2 year old Miss beside a 2 year old Dwarf apple tree.

DICKSON'S RED (Plant Patent No. 376). A glowing scarlet red rose, rich in fragrance. The blooms are produced singly on long, strong stems, very fine for cutting. A sturdy rose that thrives in the hottest summer and blooms unceasingly.

ETERNAL YOUTH (Plant Patent No. 332). Outstanding among all pink roses. The perfectly formed buds are long pointed, colored a beautiful soft pink. The full open flowers are comfortably double. Very fragrant, admirable for cutting.

MC GREY'S SUNSET (Plant Patent No. 317). This magnificent new creation is pronounced by many judges to be the finest yellow rose of all time. The color is buttercup, tipped orange, intensifying as the flower unfolds, with a light undertone of cerise, charming at all stages. You will love its exciting color and its exquisite fragrance.

EVERBLOOMING ROSES—Continued

MC GREDY'S TRIUMPH (Plant Patent No. 190). Geranium-red flushed orange gradually deepening to rich orange at base. The flowers are very large, full and of perfect shape, 5 inches across, and very fragrant.

ROME GLORY (Plant Patent No. 304). A most robust and vigorous plant, producing in quick succession long stems bearing large crimson-red buds, opening into full, well formed, fragrant, cerise-red blooms, long-lasting on the plant or when cut. Unusually winter-hardy.

FLORIBUNDA ROSES

The Floribunda Roses represent varieties especially bred for hardiness, continuity of bloom, and color effects.

They bloom in large clusters, often 50 or 60 large flowers together in one head. Their persistent continuity of bloom and the heavy massing of their color affords a striking and permanent effect from spring to fall. They grow 24 to 30 inches tall.

Floribunda Roses make the greatest effect when planted 3, 12, or more of **one** variety in a group or a bed. They are excellent to be used in place of annual flowers.
